

The International Workshop on Recent Advances for Multi-Clouds and Mobile Edge Computing (M²EC 2020)

to be held in conjunction with the

[34th International Conference on Advanced Information Networking and Applications \(AINA 2020\)](#)

April 15–17, 2020 in Caserta, Italy

M²EC 2020 Website: <https://melodic.cloud/M2EC-2020>

Scope

Today, a large number of enterprises and individuals rely on services offered by clouds to meet their computational and storage demands. However, in general, no single cloud provider is able to provide all the features a user may need in a cost-efficient way, while satisfying the user's security and performance requirements. For instance, even the most dominant cloud providers have limited geographical presence. Cloud federation enables end users to integrate segregated resources from different cloud providers. The use of Multi-Clouds offers more freedom to the cloud users, and increases the granularity of choices in the application deployment. Growing interest in Multi-Clouds pushes the need to investigate a large number of under-explored research topics, ranging from Multi-Cloud resource provisioning, application deployments, automated configurations, federated networking, adaptations, security, and privacy.

Moreover, with the growing need of real-time data analytics and critical event handling by many modern applications, such as in the Internet of Things (IoT), it is evident that the centralized compute and storage model offered by cloud computing is not suitable for such applications, due to high end-to-end latencies. Mobile Edge Computing (MEC), on the other hand, enables a computing and storage infrastructure provisioned closely to the end-users at the edge of a cellular network. Combining MEC in Multi-Cloud infrastructures can help to combat latency challenges imposed by the cloud-centric architectures.

The intent of our workshop is to bring together people from research and industry, in order to provide a discussion forum for state-of-the-art topics related to cloud, multi-cloud and mobile edge computing technology, networks and applications. The International Workshop on Recent Advances for Multi-Clouds and Mobile Edge Computing (M²EC 2020) will include full-paper sessions as well as a poster session (with short presentations) to introduce preliminary ideas as well as work in progress.

Proceedings of the workshop will be published in Springer Series "Advances in Intelligent Systems and Computing". The books of this series are submitted to ISI Proceedings, EI-Compendex, DBLP, SCOPUS, Google Scholar and Springerlink.

Topics of Interest

The main topics to be addressed include (but are not limited to):

- Design and implementation of Multi-Cloud and Cross-Cloud systems
- Networking technologies for Cloud federation
- Multi-Cloud middleware
- Cloud/Multi-Cloud resilience, robustness, load balancing, failover handling
- Cloud/Multi-Cloud monitoring, adaptation and scalability
- Cloud/Multi-Cloud security and privacy
- Cloud/Multi-Cloud use-case applications
- Cloud/Multi-Cloud (application) monitoring, adaptation and scalability
- Adaptive Multi-Cloud application provisioning
- Design and provisioning of Big Data, Multi-Cloud applications
- Inter-operability in Multi-Clouds
- Mobile Edge Computing systems
- Mobile Edge Computing for 5G network infrastructures
- Design and provisioning of Mobile Edge Computing applications
- Quality of Service in Multi-Cloud setups
- Efficient distributed storage techniques
- Low-latency transport protocols
- Low-latency storage
- Resilient networks and systems
- Multi-homed systems and advanced transport protocols
- Applications and algorithms for Big Data and Mobile Edge Computing (Multi-)Clouds
- Application deployment and support for legacy applications

Organizing Committee (in alphabetical order)

General Chairs:

- Thomas Dreibholz, SimulaMet – Simula Metropolitan Centre for Digital Engineering (Oslo, Norway)
- Feroz Zahid, Simula Research Laboratory (Fornebu, Akershus, Norway)

Publicity Chairs:

- Paweł Skrzypek, 7bulls (Warsaw, Poland)
- Xing Zhou, Hainan University (Haikou, Hainan, China)

Program Committee:

- Dimitris Apostolou, Institute of Communication and Computer Systems (Athens, Greece)
- Xuejun Cai, Ericsson (Stockholm, Sweden)
- Jörg Domaschka, Ulm University (Ulm, Baden-Württemberg, Germany)
- Thomas Dreibholz, SimulaMet – Simula Metropolitan Centre for Digital Engineering (Oslo, Norway)
- Ahmed Elmokashfi, SimulaMet – Simula Metropolitan Centre for Digital Engineering (Oslo, Norway)
- Jesús Escudero-Sahuquillo, Universidad de Castilla-La Mancha (Albacete, Castilla-La Mancha, Spain)
- Ernst Gunnar Gran, NTNU (Gjøvik, Oppland, Norway)
- Geir Horn, University of Oslo (Oslo, Norway)
- Kyriakos Kritikos, FORTH, Institute of Computer Science (Heraklion, Greece)
- Sabita Maharjan, Simula Metropolitan Centre for Digital Engineering (Oslo, Norway)
- Somnath Mazumdar, Dept. of Digitization, Copenhagen Business School (København, Denmark)
- Omer Rana, Cardiff University (Cardiff, United Kingdom)
- Paresh Saxena, BITS Pilani University (Hyderabad, India)
- Jawwad Shamsi, FAST NUCES (Karachi, Pakistan)
- Tor Skeie, Fabriscale Technologies (Fornebu, Akershus, Norway)
- Paweł Skrzypek, 7bulls (Warsaw, Poland)
- Vlado Stankovski, University of Ljubljana (Ljubljana, Slovenia)
- Salman Taherizadeh, Jozef Stefan Institute (Ljubljana, Slovenia)
- Yiannis Verginadis, Institute of Communication and Computer Systems (Athens, Greece)
- Øyvind Ytrehus, University of Bergen (Bergen, Hordaland, Norway)
- Feroz Zahid, Simula Research Laboratory (Fornebu, Akershus, Norway)
- Xing Zhou, Hainan University (Haikou, Hainan, China)

Important Dates

- **Paper Submission Deadline:** **November 20, 2019**
- Author Notification: January 20, 2020
- Author Registration: February 5, 2020
- Camera-Ready Paper Submission: February 5, 2020
